

A new frontier, a new lifestyle.

SEKISUI

It takes know-how to see the possibilities  
SEKISUI in Europe – all our expertise near you

## It takes experience to build bridges that arrive at smart solutions

In Europe, SEKISUI offers you outstanding plastics for industrial applications with focus on four business fields: Transportation, Construction & Infrastructure, Electronics and Medical Diagnostics.

We are aligned in a group of 9 companies spread over seven countries with over 1,000 employees. SEKISUI in Europe is able to look back on more than 50 years of experience. Our customers benefit from efficient and sustainable solutions ... solutions that are based on a partnership-oriented approach and reliable services. As a group of companies, we combine our internal strengths to look beyond. Our ultimate aim is to develop outstanding solutions that will help improve people's lives – all over the world.

## Where we come from

The SEKISUI Chemical Group, a Japanese conglomerate, is the holding company for the SEKISUI companies in Europe. The name SEKISUI was originally used in classical Asian literature and refers to pent-up water that displays tremendous force when released. The SEKISUI Chemical Group has enjoyed a leading position in the housing sector and in the processing industries for polymer-based materials for more than 65 years – just like pent-up water. Today, the group employs more than 25,000 people all over the world in its factories in Japan, South Korea, Thailand, China, Europe, Australia, the USA and Mexico.

## Our aim is to deliver smart solutions

At SEKISUI we aim to combine manufacturing excellence with unique materials for environmentally-friendly products that advance society for generations to come. Therefore, our product range is comprehensive, spanning from high-performance thermal and acoustic insulation, ultra-lightweight automobile components, infrastructure rehabilitation to sound-reduction products for construction and much more. We service the following four business sectors:

**Transportation:** The automotive and aviation industries achieve comfort, safety, high durability and fuel efficiencies with our products. Our product range includes components for automotive interiors, exteriors and electronics as well as polymers that have been adapted to meet the extraordinary demands encountered in the aviation industry.

**Construction & Infrastructure:** We are able to contribute to safe and convenient urban infrastructures with products that are heat-, chemical- and fire-resistant as well as with materials for use in water infrastructures and maintenance technologies.

**Electronics:** Our advanced technologies increase the resolutions and responsiveness achieved by flat panel displays. Our adhesives and plastics are able to boost semiconductor performances.

**Medical Diagnostics:** We advance medical care through fully integrated technologies using biological raw materials, reagents, testing devices and instrumentation.

# The basis of our approach

## The 3S Principle – our corporate philosophy

We want to exceed the expectations of our five stakeholders (customers, shareholders, employees, business partners, local communities and the environment) by utilizing our 3S Principle. The 3S equal:

**Service:** Creating value for society through business activities

**Speed:** Transforming markets with all the power and vitality of a mighty waterfall

**Superiority:** Earning the trust of society through prominence in technology and quality

Our claim “A new frontier, a new lifestyle.” sums up our goal: to develop the frontiers of chemical and medical solutions through prominence in technology and with highest quality standards, thus opening up new horizons for society at large.

## Making a difference – the SEKISUI Environment Sustainability Vision 2030

At SEKISUI, we take responsibility: for humans, our planet and for our actions. This is part of our corporate thinking and activities, embedded deeply in our organisation. We expand on this idea continuously along the complete value chain incorporating suppliers, downstream manufacturers and end users.

At SEKISUI Europe, we therefore place a strong emphasis on our environmental commitment. Besides creating value, serving society and advancing technology in their respective markets, the European SEKISUI companies act with strong social and environmental responsibility.

In line with the SEKISUI Environment Sustainability Vision 2030, SEKISUI companies are continually adapting their portfolios to expand environmentally and socially contributing products and services. These products add value to people's daily lives around the world in respect to safety, comfort and health.

The SEKISUI Environmental Sustainability Index tracks efforts and brings natural capital into the mix of management decisions.

The SEKISUI Chemical Group respects international CSR norms and standards, including the Universal Declaration of Human Rights, ISO 26000, the OECD's Guidelines for Multinational Enterprises, the ILO's International Labour Standards, and the United Nations' Guiding Principles on Business and Human Rights (Ruggie Framework) and signed the United Nations Global Compact. In Europe, SEKISUI companies cooperate with external advisory boards, NGOs and grasp at close communication with local municipalities.

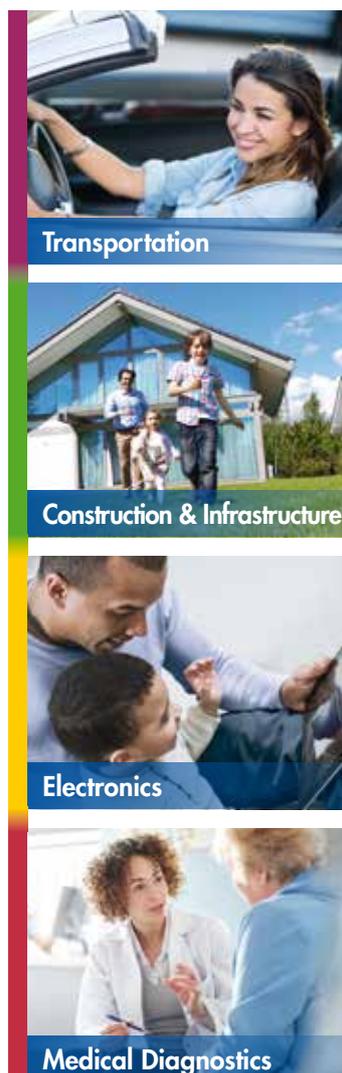

## We run our business with a focus on customer benefits

The basis for SEKISUI's success lies in our business concept: We combine advanced polymers with our clever competencies, consisting of a combination of processing technologies and unique polymer-based materials, as well as well-grounded analysis and evaluation methods.

### Our processes & functions

<p><b>Materials</b></p> <p>With our high polymer-based material technology, we meet the diversified needs of customers.</p>	<p><b>Functional Resin</b></p> <p>We develop not only the polyvinyl butyral (PVB) resin used for automotive interlayer film but also our original high-performance resins, such as acrylic and epoxy.</p>
<p><b>Processing</b></p> <p>Fine processing control and development of unparalleled new processes lead to the development of unique products.</p>	<p><b>Functional Thin Film</b></p> <p>A nano-level thin film is created using unique sputtering technology, with various functions. We offer commercial products using transparent conducting films (ITO film).</p> <p><b>NanoHybrid</b></p> <p>A technology to mix different kinds of materials such as organic and inorganic materials at a nano level. The technology results in the processability, strength and heat resistance that a single material cannot achieve.</p> <p><b>Polymer Processing Foundation</b></p> <p>Polymer processing technologies such as extrusion, foaming, precision molding and coating support SEKISUI's product lines.</p>
<p><b>Analysis and Evaluation</b></p>	<p><b>Bioanalysis</b></p> <p>We develop, manufacture and distribute diagnostic reagents and equipments with the technologies of lipid analysis, latex turbidimetric immuno-analysis, glycan analysis, immuno-chromatographic and blood clot analysis.</p>

### Our business fields

# Sekisui Specialty Chemicals Europe, S.L.

Sekisui Specialty Chemicals was formed on July 1, 2009, when it acquired the polyvinyl alcohol (PVOH) business from Celanese. Our mission is to produce and sell high-quality Selvol™ PVOH resin and Advasol™ water-soluble film while surpassing customer quality specifications and offering efficient global technical support.

Our company produces Selvol™, one of the most comprehensive lines of polyvinyl alcohol polymers and copolymers. Selvol™ is used in a variety of applications including paper coatings, wood adhesives, personal care, construction sealants, oil field lubricants and many other specialty applications. We also produce Advasol™, a patented series of water-soluble film that is more resistant to harsh chemicals than other commercially available films.
