- \*1 Undisclosed.
- \*2 Targets revised due to the postponement of Enterprise Resources Planning (ERP) implementation.
- \*3 CSIRT: Abbreviation for Computer Security Incident Response Team. Plays a role in preventing cybersecurity incidents and a role in rapid response and recovery in the unlikely event of a cybersecurity incident.
- \*4 Target after redefining indicator.
- \*5 Number of successor candidates to the most senior business leader post ÷ Number of the same post
- \*6 Hours of training per employee in the fiscal year
- \*7 No institutional wage disparity; differentials based on the composition of labor (age and qualifications) rate
- \*8 Indicators other than the degree of challenging behavior expression and the successor candidate readiness rate are disclosed as SEKISUI CHEMICAL non-consolidated targets.

# **Products to Enhance Sustainability**

# Net Sales / Proportion of Products to Enhance Sustainability, Number of Products to Enhance Sustainability Newly Registered

Note 1: From FY2020, the product system has evolved and renamed Products to Enhance Sustainability.

Note 2: In line with a change in the control of certain businesses in the UIEP and HPP companies implemented from October 2022, net sales for FY2022 of both companies are collated as if the change in control had been initiated from the beginning of FY2022.

## Net Sales / Proportion of Products to Enhance Sustainability

# **Environment**

# Integrated index SEKISUI Environment Sustainability Index.

The SEKISUI Environment Sustainability Index measures the impact of the Group's corporate activities on the environment (use of natural and social capital) and the degree of contribution to the environment (returns to natural and social capital) as a single index.

We are gradually expanding the scope of coverage to encompass not only the impact on and return of natural capital, but also on and of social capital.

The SEKISUI Environment Sustainability Index integrates the effects of the major items for implementation in the Environmental Medium-term Plan: reducing various impacts on the environment, expanding products and services that contribute to the natural and social environments, and environmental conservation. We established a method for undertaking preliminary calculations in fiscal 2013 and have employed this method since fiscal 2014. Since fiscal 2017, we have applied this index to monitor the progress of the Group's overall environmental management.

In our Environmental Medium-term Plan, which began in fiscal 2020, we have declared our intention to use the SEKISUI Environment Sustainability Index to evaluate not only the natural environment, but also the impact and contribution to the social environment, and to contribute to the return to natural and social capital.

In 2050, even as we expand our business scope, we will promote ESG management while maintaining a return of 100% or more on natural and social capital.

# Calculation Results

SEKISUI Environment Sustainability Index calculations based on FY2023 results are as follows. Setting the use of natural and social capital (the impact on the natural and social environments) at 100, the return to natural and social capital (contributions to the natural and social environments) was 106%, confirming that the return to natural and social capital was maintained above 100%.

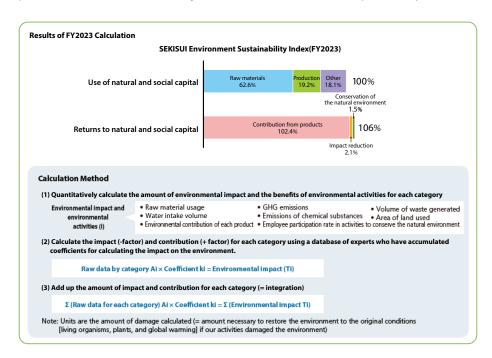

Trends in the rate of return are analyzed as follows.

- 1. Use (impact) of natural and social capital A reduction in the impact on natural and social capital is considered to have been made through progress in the shift to renewable energy for purchased power.
- 2. Returns to natural and social capital (contributions) Returns (contributions) from Products to Enhance Sustainability are steadily increasing.

Looking ahead, we will grow as a company and expand our business scope, while maintaining a rate of return to natural and social capital of more than 100%.

In 2050, we aim to realize the sustainable use of the earth's natural capital and the social capital generated by human society.

In this index, SEKISUI CHEMICAL Group believes that solving issues through products helps to improve the sustainability of the earth and society. We also recognize that improving returns to natural and social capital leads to an improvement in the sustainability of SEKISUI CHEMICAL Group and its products.

After compiling the raw data in (1), above, the damage calculation-based impact assessment method LIME2, developed for use in Japan by Professor Norihiro Itsubo of WASEDA University, was employed for the calculations in stages (2) and (3).

The LCA database IDEA ver2.3 has been upgraded to ver3.1 in the calculation system MiLCA, which uses LIME2 to calculate the rate of return. We have been using the upgraded MiLCA ver3.1 since fiscal 2023. (MiLCA ver2.3 was used until fiscal 2022).

In MiLCA 3.1, the ascertained data shows that the environmental impact per unit amount is larger, especially in terms of the impact of chemical substances on ecosystems. Under the current Medium-term Management Plan we will place even more importance on the impact on biodiversity, and promote activities aimed at shifting from negative to positive aspects. We have determined that our approach is consistent with the direction MiLCA 3.1 upgrades We will reconfirm the status of current conditions by utilizing the updated calculation system and continue to confirm the progress of activities aimed at addressing environmental issues based on the rate of return from fiscal 2023.

The impact of the change in MiLCA calculation system approach (upgrade) on the rates of return as verified based on fiscal 2022 data is as follows.

Rate of return on natural and social capital of 127.3% (using MiLCA ver. 2.3) in fiscal 2022.

Rate of return on natural and social capital of 100.1% (using MiLCA ver. 3.1) in fiscal 2022.

| Indicator   | Calculation Method   |
|---|--|
|   | SEKISUI Environment Sustainability Index = Group-wide amount of natural and social capital returned / Group-wide amount of natural and social capital used   |
| SEKISUI<br>Environment<br>Sustainability<br>Index | Calculating the amount of natural and social capital used and the amount of natural and social capital returned  Employing LIME 2 (a damage calculation-based impact assessment method developed for use in Japan by Professor Norihiro Itsubo of WASEDA University) and covering all the four criteria for conservation defined by LIME 2, the impacts on each of human health (including the effects of global warming), societal assets (including the effects of global warming), the effects on plants (reducing interference on growth), and the effects on life (restricting the extinction of living species) were evaluated and then made into a single indicator.  The amount of return to natural and social capital is calculated assuming that the risk of damage to natural capital has been reduced by various environmental contribution efforts of the entire Group compared to the case without such efforts.  Ittems included in the amount of natural and social capital used  Direct use: Use of land, greenhouse gases, amounts of emissions into the air of PRTR substances and air pollutants, the COD discharged into bodies of water  Indirect use: Purchased raw materials*1, energy use, water intake volume, amount of waste material emitted, amount of GHGs emitted indirectly in supply chains (Scope 3)  Items included in returns to natural and social capital  Amount of contributions to reducing use of natural capital through Products to Enhance Sustainability, the amount of contribution from environmental conservation activities, environment-related donations, mega-solar (solar farms that produce over 1,000 kilowatts (1 megawatt) of energy each year) power generation output  *1 The Group is reflecting the actual GHG emissions of its raw material suppliers with regard to four principal resins (PP, PE, PVC and PVA). |

| Indicator   | Calculation Method  |
|---|---|
|   | Scope of Calculation / Listing by category of calculation: Estimated calculations were conducted using the following assumed conditions:  |
|   | <ul> <li>Raw materials: Purchased raw materials covered; estimates incorporated into calculations         Concerning housing, the calculation includes the constituent raw materials for one structure multiplied by the number of structures manufactured</li> <li>Manufacturing / Emissions of harmful chemical substances: 〈Japan〉 emissions of 1 t per year or more of substances covered under PRTR are included in the calculation.</li></ul>   |
| SEKISUI<br>Environmental<br>Sustainability<br>Index | •Manufacturing / Land maintenance: Domestic plants and research facilities were incorporated into the calculation using the area of the premises, generally considered in terms of the land used for buildings*2. The areas of the premises of overseas plants were estimated. The effects of land use are included in the calculation based on the 30-year period after the purchase of the land  *2 Concerning land use, starting with FY2017, improvements to land quality in the JBIB Land Use Score Card® system promoted in Japan were deemed as reductions of the impact of land use, weighted accordingly, and included in the calculation.   |
|   | •Others: Capital goods in supply chains, other fuel- and energy-related activities, transport and shipping, waste, business trips, commuting by employees, leased assets (downstream), processing/use/disposal of sold products  Business trips and commuting by employees: Covers consolidated numbers of employees and includes some estimation  Use of sold products: Covers housing sold during the fiscal year, and included in the calculation with assumed energy use for 60 years into the future. We are also calculating the effect of reduction in energy used in residences built to net zero energy house (ZEH) specifications.  Processing of sold products: Energy use by customers while processing our products anticipated to consume large amounts of energy was estimated and included in the calculation  Disposal of sold products: Major raw materials for each fiscal year were covered and included in the calculation based on the assumption that they would be made into products and disposed of during that fiscal year |

| Indicator   | Calculation Method  |  |  |  |  |  |  |
|---|---|--|--|--|--|--|--|
| SEKISUI<br>Environmental<br>Sustainability<br>Index | Product contributions: (1) The differences in contribution to the environment between the relevant products and previous technologies were evaluated qualitatively for each criterion, based on the contribution to the natural and social environments for each life-cycle (the five stages of procurement of raw materials, manufacturing, distribution, use/maintenance, disposal/recycling) in terms of CO₂ reductions and energy savings, reductions in waste materials, resource savings, water-savings and the water cycle, preventing pollution, direct preservation of biodiversity, QOL improvements, and other factors. For factors for which a significant difference was estimated, data per product unit was investigated.  (2) Based on the results*3 of these investigations, a coefficient for calculating the impact on the environment for each series of data was multiplied by the data, yielding a calculation of the degree of contribution to the environment of each product unit.  (3) The sales amount for products unit.  (3) The sales amount for products in each fiscal year were multiplied by the results found in (2) to calculate the degree of contribution to the environment for each product, and the results were included in the calculation. Trial calculation was performed on the effects of products equivalent to around 51% of Products to Enhance Sustainability.  *3 Based on individual standards of the divisional companies  *Direct contribution / Contribution from activities reducing environmental impacts:  The effects on the environment relating to production for each fiscal year were compared to [the effects on the environment relating to branufacturing in Pry2016 x (revenue in that fiscal year / revenue in FY2016)], and the difference was included in the calculation. There was a proportional relationship between revenue and the effects on the environment relating to manufacturing in Pry2016 x (revenue in that fiscal year / revenue in FY2016), and the difference was included in the adoution of the heart of time spent on each activ |  |  |  |  |  |  |

# **Environmental Management System**

Our overseas bases are expanding and implementing the environmental management system (EMS) developed in Japan. In this manner, we have established a system for acquiring environmental impact data and are working to reduce environmental impact based on this data.

As of the end of March 2024, 51domestic sites and 35 overseas sites had acquired ISO 14001 or other certification. These certified sites account for 90% of the total number of Group production sites and research institutes. We are also working to obtain ISO 14001 certification at all of our production sites.

SEKISUI CHEMICAL Co., Ltd. R&D Center\* Sekisui LB Tec Co., Ltd. Chubu Plant

Note: Some sites without brackets may include related sections that have received EMS certification.

- []: Organizations in brackets are included in the scope of certification.
- \* The SEKISUI CHEMICAL Co., Ltd. Tsukuba R&D Site and the Development Center share a single certification.

| Summation period          | April 1, 2023 to March 31, 2024   |
|---------------------------|---|
| Scope of summation        | Production sites, research facilities, housing sales company sites, and Corporate Headquarters departments in Japan.  |
| Calculation Method        | Based on the Ministry of the Environment's Environmental Accounting Guidelines 2005<br>Edition  |
| Approach toward summation | <ul> <li>Depreciation and amortization are excluded from environmental conservation costs because they overlap with investment costs.</li> <li>Investment amounts are based on budget approvals during the summation period.</li> <li>Expenditures and investments that contain other than environmental conservation activities are distributed pro-rata in 10% increments.</li> <li>Disclosure categories have been revised, environmental conservation costs are subcategorized, and the economic effects of environmental conservation measures are limited to effects on an actual basis, excluding deemed effects from FY2020.</li> <li>The environmental conservation effects of physical quantity are shown in environmental performance data disclosed in each chapter.</li> </ul> |

| Indicator                      | Calculation Method  |  |  |  |
|--------------------------------|---|--|--|--|
| Greenhouse<br>Gas<br>Emissions | GHG emissions = Σ[fuel use, purchased electricity, purchased steam × CO₂ emissions coefficient] + greenhouse gas emissions from non-energy consumption sources  Greenhouse gas emissions from non-energy consumption sources = CO₂ emissions not arising from energy consumption* + Σ[emissions of non-CO₂ greenhouse gases × global warming potential]  *Includes CO₂ emissions from burning of non-fuel gases based on the Act on Promotion of Global Warming Countermeasures, both inside Japan and overseas  [CO₂ Emissions Coefficient]  Purchased Electricity: In Japan, the coefficient provided in notices pursuant to the Act on Promotion of Global Warming Countermeasures is applied to the latest data at the start of each fiscal year. In case the purchased electricity for which the emission factors are set for each menu, the adjusted emission coefficient applies.  For overseas data, the latest coefficient data obtained from local power suppliers as of the beginning of each fiscal year is applied. If not available, based on IEA Emission factors 2022, EPA eGRID 2021.  City Gas / Natural Gas and Purchased Steam: Coefficients obtained from suppliers are applied to the latest data at the start of each fiscal year.  If a coefficient cannot be obtained in this manner, it is based on the Act on Promotion of Global Warming Countermeasures.  Fuel Other than the Above: Based on the Act on Promotion of Global Warming Countermeasures.  Global warming potential: Emissions coefficients determined based on greenhouse gas emission calculations, reports, and official disclosures.  Fuels that corresponds to energy sources is calculated based on the Act on Promotion of Global Warming Countermeasures both in Japan and overseas. |  |  |  |
| Energy Use                     | Energy use = $\Sigma$ [amount of fuel used, amount of electricity purchased, amount of solar power generation for in-house use, and amount of steam purchased x unit calorific value] [Unit Calorific Value] Purchased Electricity: 3.60 MJ/kWh (Amount of solar power generation for in-house use and amount of purchased electric power from renewable energy sources are included in the energy use) Fuel, Purchased Steam: Based on the Act on Rationalization of Energy Use and Shift to Non-fossil Energy   |  |  |  |

# Transportation Volumes and Energy per Unit of Transportation (Index)\* / Japan

# CO<sub>2</sub> Emissions during the Transportation Stage / Japan

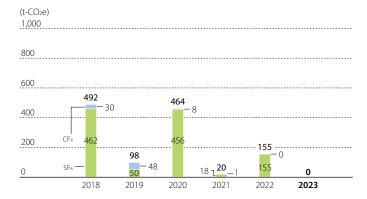

<sup>\*</sup> Energy consumption per unit of transportation volume

| Indicator  | Calculation Method  |
|--|---|
| CO <sub>2</sub> Emissions<br>during the<br>Transportation<br>Stage | The calculation is made by combining the fuel consumption method (transport of housing units, etc.) and the improved ton-kilometer method (other than transport of housing units, etc.) $CO_2$ emissions = $\Sigma$ [fuel use $\times$ $CO_2$ emissions coefficient] + $\Sigma$ [amount transported (metric tons) $\times$ distance transported (km) $\times$ fuel use per unit of transportation $\times$ $CO_2$ emissions coefficient] Fuel use per unit of transportation is the value used in the reporting system for specified freight carriers under the Act on the Rational Use of Energy Major domestic distribution (shipment of products) is covered |

## Emissions of Non-CO<sub>2</sub> Greenhouse Gases (Global Production, Laboratories)

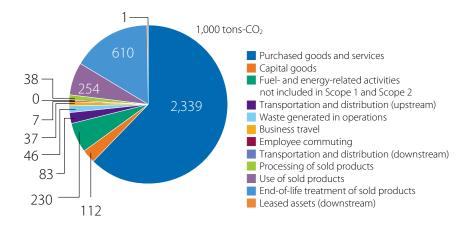

Note: Zero emissions due to improvements in working method with respect to the recovery of  $SF_6$  from FY2023.

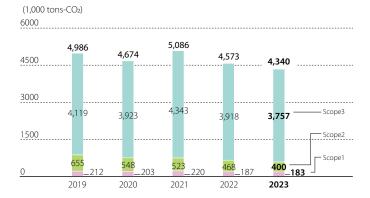

# Greenhouse Gas Emissions throughout Our Supply Chain (Scope 3)

# Greenhouse Gas Emissions throughout Our Supply Chain as a Whole (Classified by Scope)

Note: Some past figures have been revised due to improvements in precision.

| Indicator   | Calculation Method  |  |  |  |  |
|---|---|--|--|--|--|
|   | Purchased<br>Goods and<br>Services  | ${\sf CO_2}$ emissions = $\Sigma$ [(amount of major raw materials used (excluding substances subject to regulation by the PRTR Law) as listed in Material Balance section of this report + estimated values for other raw materials) × emission coefficient (Inventory Database for Environmental Analysis (IDEA) Ver.3.1 (the world's largest GHG emissions database developed by the National Institute of Advanced Industrial Science and Technology (IDEA v.3.1))] Calculated using MiLCA v.3.1 software from LCA Expert Center Co., Ltd. that incorporates IDEA v.3.1. The Group has reflected the actual GHG emissions of its raw material suppliers with regard to four principal resins (PP, PE, PVC and PVA) from FY2018. |  |  |  |
|   | Capital Goods   | $CO_2$ emissions = $\Sigma$ [(amount of spending on capital expenditures authorized for the given fiscal year for buildings, structures, mechanical equipment, and transport vehicles) × emissions coefficient (per unit emissions database for calculating organizational greenhouse gas emissions, etc., arising from supply chains (Ver. 3.4) (Ministry of the Environment and Ministry of the Economy, Trade and Industry))]   |  |  |  |
| Greenhouse  | Fuel- and Energy-related Activities not Included in Scope 1 and Scope 2                           | ${\sf CO_2}$ emissions = ${\sf \Sigma}$ [(fuel use, amount of purchased electricity, and amount of purchased steam) × emissions coefficient] The emissions coefficients used are as follows. For fuel IDEA v.3.3 For purchased electricity and steam, per unit emission database for calculating greenhouse gas emissions by organizations, etc., arising from supply chains (Ver. 3.4) (Ministry of the Environment and Ministry of the Economy, Trade and Industry). Applicable to production sites, laboratories, and offices both inside Japan and overseas.   |  |  |  |
| Gas<br>Emissions<br>throughout<br>Our Supply<br>Chain | Transportation<br>and Distribution<br>(Upstream)<br>(Transportation<br>of major raw<br>materials) | $CO_2$ emissions = $\Sigma$ [amount of major raw materials used (excluding substances subject to regulation by the PRTR Law) as listed in the Material Balance section of this report × transport distance × emission coefficient (IDEA v.3.3)] (Calculated assuming that the transport distance was uniformly 200 km)   |  |  |  |
|   | Transportation and Distribution (Downstream) (Transportation of products)                         | The calculation is made by combining the fuel consumption method (transport of housing units, etc.) and the improved ton-kilometer method (other than transport of housing unit, etc.) $ CO_2 \text{ emissions} = \Sigma[\text{fuel use} \times CO_2 \text{ emissions coefficient}] + \Sigma[\text{amount transported (metric tons)} \times \text{distance transported (km)} \times \text{fuel use per unit of output} \times CO_2  emissions coefficient (value used in the reporting system for specified freight carriers under the Act on the Rational Use of Energy)] (Estimates used for overseas)  Covers shipments of products by Group companies in Japan and overseas. $   |  |  |  |
|   | Waste<br>Generated in<br>Operations   | $CO_2$ emissions = $\Sigma$ [amount of waste materials generated (by type) × emission coefficient (IDEA v.3.3)]<br>Scope: Major production sites and research facilities in Japan and overseas.  |  |  |  |
|   | Business Travel   | ${\sf CO_2}$ emissions = ${\sf \Sigma}$ [transportation costs by method of transport ${\sf \times}$ emissions coefficient (per unit emissions database for calculating organizational greenhouse gas emissions, etc., arising from supply chains (Ver. 3.4) (Ministry of the Environment and Ministry of the Economy, Trade and Industry))] (Includes estimates of transportation costs for Group companies) Group companies in Japan and overseas all covered.  |  |  |  |

| Indicator   | Calculation Method                           |   |  |  |
|---|--|---|--|--|
|   | Employee<br>Commuting                        | ${\sf CO_2}$ emissions = ${\sf \Sigma}$ [amount spent on commuting allowance ${\sf \times}$ emissions coefficient (per unit emissions database for calculating organizational greenhouse gas emissions, etc., arising from supply chains (Ver. 3.4) (Ministry of the Environment and Ministry of the Economy, Trade and Industry)] (Calculated based on the assumption that all commuting is done by passenger train) (Group company commuting costs include estimates) Group companies in Japan and overseas all covered.  |  |  |
|   | Processing of<br>Sold Products               | $CO_2$ emissions = $\Sigma$ [production volume of relevant products × emission coefficient at the time of processing the relevant products (IDEA v.3.3)] Covers products for the automotive industry by Group companies in Japan and overseas.  |  |  |
| Greenhouse<br>Gas<br>Emissions<br>throughout<br>Our Supply<br>Chain | Use of Sold<br>Products                      | $CO_2$ emissions = $\Sigma$ [number of structures sold as housing during the relevant fiscal year × amount of electricity purchased from power companies throughout a year × 60 years × electricity-based emissions coefficient], including the effect of the solar power generation system. The amount of electricity purchased from power companies throughout a year is based on the Electricity Income and Expenditure Home Survey of Houses with Built-In Solar Power Generation Systems (2023). The electricity-based emissions coefficient employed is the emissions coefficient from the FY2023 report produced by the Act on Promotion of Global Warming Countermeasures reporting system (alternate value), equal to 0.441 metric tons- $CO_2$ /MWh. The calculation is performed under the assumption that housing will be used for 60 years. Housing sold within Japan for the fiscal year relevant to the calculation is covered. Up to and including FY2017, the Group calculated the amount of greenhouse gas reduction achieved through solar power generation as the amount of reduced environmental impact. From FY2018, however, we are also calculating the effect of reduction in energy used in residences built to zero energy house (ZEH) specifications. |  |  |
|   | End-of-life<br>Treatment of<br>Sold Products | $CO_2$ emissions = $\Sigma$ [amount of major raw materials used in the products sold during the relevant fiscal year × emission coefficient (IDEA v.3.3)] The calculation assumes that products sold during a given fiscal year are disposed of during the same fiscal year.  |  |  |
|   | Leased Assets<br>(Downstream)                | Calculated for construction work carried out using machinery leased by SEKISUI CHEMICAL. $CO_2 \ emissions = \Sigma [relevant installation units \times fuel usage per unit \times CO_2 emissions coefficient (emissions coefficient determined based on a system of greenhouse gas emission calculations, reports, and official disclosures)]$   |  |  |

# (Recycling Rate for Waste Plastic Materials, Amount of Waste Generated, etc.)

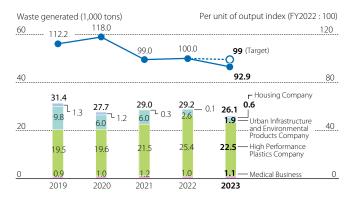

# Waste Generated by Production Sites

- Note 1: Some past figures have been revised due to improvements in precision.
- Note 2: In line with a change in the control of certain businesses in the UIEP and HPP companies implemented from October 2022, net sales for FY2022 of both companies are collated as if the change in control had been initiated from the beginning of FY2022.

# Waste Generated by Production Sites, per Unit of Production (Index) / Japan

#### Waste generated (1,000 tons) Per unit of output index (FY2022: 100) 107.0 100.0 95.2 --- **99** (Target) 80 35.4 355 34.6 Housing Company 10.0 9.2 9.1 9.5 Urban Infrastructure 7.2 and Environmental Products Company 40 High Performance Plastics Company Medical Business 0.3 0.5

# Waste Generated by Production Sites, per Unit of Production (Index) / Overseas

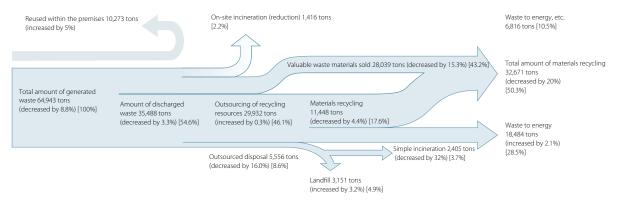

Note: Amount of waste generated: Only focusing on waste responsible by the production site is considered. Prototypes and inventory disposal due to the responsibility of the Divisional Companies are not included.

#### Production Site Waste Generation and Disposal / Japan and Overseas

(tons)

|        | Total Waste | Recycled Waste | Unrecycled Waste |
|--------|-------------|----------------|------------------|
| FY2018 | 76,249      | 65,525         | 10,724           |

Rate of recycling: Material recycling and Chemical recycling

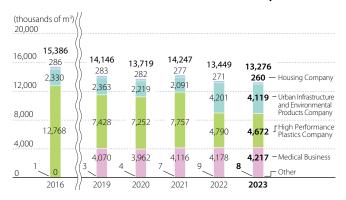

Rate of recycling: Material recycling, chemical recycling, and thermal recycling Note: Some past figures have been revised due to improvements in precision

# **Reducing Water-related Risks**

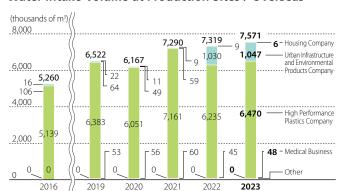

# (Water Intake Volume and Wastewater Discharge at Production Sites, etc.)

Note: In line with a change in the control of certain businesses in the UIEP and HPP companies implemented from October 2022, the data for FY2022 of both companies is collated as if the change in control had been initiated from the beginning of FY2022.

## Water Intake Volume at Production Sites / Japan

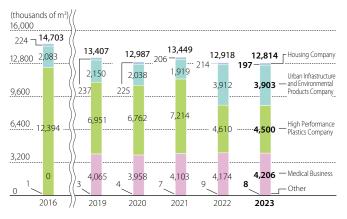

#### Water Intake Volume at Production Sites / Overseas

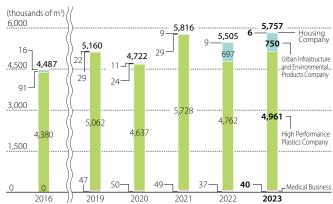

Note: Some past figures have been revised due to improvements in precision

# Wastewater Discharge at Production Sites / Japan

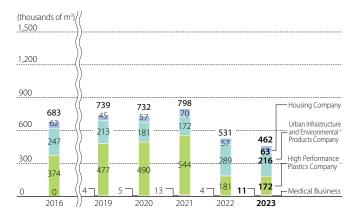

## **Wastewater Discharge at Production Sites / Overseas**

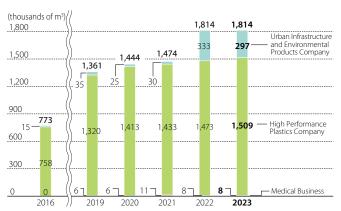

Note: Some past figures have been revised due to improvements in precision

# Water Consumption at Production Sites / Japan

# **Water Consumption at Production Sites / Overseas**

Note: Some past figures have been revised due to improvements in precision

| Indicator                          | Calculation Method  |
|------------------------------------|---|
| Water intake volume                | Water intake volume = Total Water intake volume = (The sum of water intake from surface water, ground water, seawater, and third-party water)               |
| Wastewater discharge               | Wastewater discharge = Total wastewater discharge = (The sum of wastewater discharged to surface water, ground water, seawater, and third-party wastewater) |
| Water consumption                  | Water consumption = Water intake volume - wastewater discharge  |
| Areas in regions with water stress | Areas where Baseline Water Stress is ranked as High or Extremely High under the WRI Aqueduct™ Water Risk Atlas (Aqueduct 4.0) Evaluation System             |

# **COD Discharge / Japan**

Note: Some past figures have been revised due to improvements in precision

| Indicator     | Calculation Method  |
|---------------|---|
| COD Discharge | Discharge = $\Sigma$ [COD concentration (annual average of measured values) × Water discharge volume] |

# Results from the JBIB Land Use Score Card®.

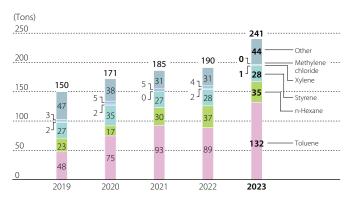

|                           | FY2023                               |
|---------------------------|--------------------------------------|
| JBIB Land Use Score Card® | Up 1.5 points (compared with FY2022) |

| Index  | Calculation Method   |
|--|--|
| Points of JBIB Land Use<br>Score Card <sup>®</sup> | The JBIB Land Use Score Card® is an Ikimono Symbiotic Coexistence Enterprise® promotion tool that aims to evaluate the degree of contribution to biodiversity of company-owned land. This Score Card serves as a sheet that evaluates the area, quality, and management system of green spaces at each business site on a 100-point scale.  The JBIB Land Use Score Card® is used to evaluate each business site for the fiscal year in question, and to calculate the increase from the number of points compared with FY2022. The indicator is the average point increase across all business sites. |

# Chemical Substance Management (Amount of Emissions / Transfer of Chemical Substances Subject to Regulation by the PRTR Law, etc.)

- Note 1: From FY2019, Medical Business results have been tabulated on a stand-alone basis owing to its separation from the HPP Company. The presentation of Corporate Headquarters results has been reclassified as Other.
- Note 2: In line with a change in the control of certain businesses in the UIEP and HPP companies implemented from October 2022, the data for FY2022 of both companies is collated as if the change in control had been initiated from the beginning of FY2022.
- Note 3: Figures are tabulated based on the review of designated chemicals under the PRTR Law, which was revised in FY2023. However, data prior to FY2022 has not been retroactively revised.

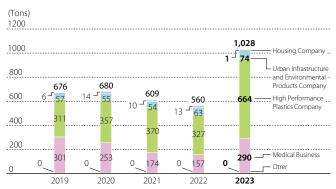

# Amount of Chemical Substance Emission and Transfer (PRTR Law) / Japan

Note: Despite a change in the substances covered following revisions to the law in 2023, past data has not been retroactively adjusted.

| Index   | Calculation Method   |
|---|--|
| Amount of<br>Emissions /<br>Transfer of<br>Chemical<br>Substances | Amount of emissions / transfer of chemical substances subject to regulation by the PRTR Law: Amount of emissions = Amount of emissions into the air + Amount of emissions into public waters + Amount of emissions into the soil on-site + Amount disposed by landfill on-site Transfer volume = Amount transferred to sewers + Amount transferred as waste material Scope: Covers production sites and research facilities in Japan |

# Discharge of Volatile Organic Compounds (VOCs) into the Atmosphere / Japan

Note: Despite a change in the substances covered following revisions to the law in 2023, past data has not been retroactively adjusted.

| Index            | Calculation Method   |  |  |  |  |

|-----------------------------|--------|--------------------|--------|--------|--------|
| Innovation School (persons) | 69     | Not<br>implemented | 102    | 102    | 54     |

## **Engagement Survey**

Note: Some past figures have been revised due to improvements in precision.

- Scores are calculated using fiscal 2019 as 100.
- Survey scope: All employees (including regular full-time, non-full-time employees, and dispatch employees) of 157 of the 160 Group companies surveyed.
- Coverage rate: Percentage of companies surveyed relative to the number of Group companies in Japan and overseas.
- Response rate: Percentage of employees who responded to the survey relative to the total number of employees of the companies where the survey was conducted.
- Interim surveys were conducted by the organization of choice in fiscal 2020 and fiscal 2021 (reference data).

# **Career Training Attendance Results (SEKISUI CHEMICAL)**

| Training Program Name  | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|
| Career autonomy supervisor training (persons)  | 393    | 252    | 134    |
| Career plan basic training (persons)   | _      | 17     | 62     |
| Newly appointed management career planning training (persons)                                  | _      | 203    | 204    |
| Career planning training for those being promoted to Advanced Level (non-managerial) (persons) |        | 89     | _      |
| New employee career planning training (persons)  | _      | 78     | 95     |

### Achieving The Right Talent in the Right Position (Rate of Successor Candidate Preparation, Hours of Training per Full-time Employee, etc.)

### Rate of successor candidate preparation (SEKISUI CHEMICAL)

|   | FY2021 | FY2022 | FY2023 |
|---|--------|--------|--------|
| Rate of successor candidate preparation | 50.5   | 67.7   | 92.4   |

### Training Results Common throughout the Group

|  | FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|--------|--------|
| Newly appointed manager receiving training (persons) | 252    | 220    | 199    | 213    | 210    |

### Hours of training per full-time employee (SEKISUI CHEMICAL)

|                   | FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|-------------------|--------|--------|--------|--------|--------|
| Hours of training | 9.4    | 6.3    | 7.1    | 6.1    | 6.2    |

### **Evaluator Training Results (SEKISUI CHEMICAL)**

|  | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|
| Evaluator training (understanding the evaluation system) (persons)                             | 941    | 75     | 164    |
| Evaluator training (understanding the evaluation system + basics of evaluation) (persons)      | 493    | _      | _      |
| Training to strengthen evaluation skills (1) (basic of evaluation + goal setting) (persons)    | _      | 146    | 62     |
| Training to strengthen evaluation skills (2) (daily management + interview training) (persons) | _      | 148    | 64     |

In line with the introduction of a new evaluation system, we conducted a two-tiered training program. The first to promote understanding of the evaluation system and a second to promote understanding of the evaluation system together with the basics of evaluation for those with little evaluation experience in fiscal 2021.

Building on the content of each of the aforementioned programs aimed at promoting an understanding of the evaluation system as well as the basics of evaluation, we conducted training to strengthen evaluation skills from fiscal 2022.

### Trends in the Number of Specialty-position Employees (SEKISUI CHEMICAL)

|  | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|
| Number of Specialty-position employees | 32     | 38     | 39     |

Note: Professional human resources who demonstrate a high level of expertise, which is the source of our competitiveness

### **Number of Japanese Employees Stationed Overseas SEKISUI CHEMICAL Group (FY2023)**

| Breakdown by Region (Persons)  |    |  |  |  |
|--------------------------------|----|--|--|--|
| North America/Latin America 54 |    |  |  |  |
| Europe                         | 36 |  |  |  |
| Asia / Oceania                 | 94 |  |  |  |

# Achieving Diversity (Ratio of Female to Total Hires, Ratio of Female Managers, Gender Wage Gap, etc.)

### Composition, Number, and Ratio of Female Directors and Audit and Supervisory Board Members (SEKISUI CHEMICAL) (FY2023)

| Employee Turnover (Number of People | Female | 10     | 26     | 20     | 25     | 19     |
| Who Left Employment) (persons)      | Total  | 73     | 74     | 94     | 110    | 95     |
|                                     | Male   | 98.0   | 98.4   | 97.6   | 97.2   | 97.6   |
| Retention Rate (%)                  | Female | 98.3   | 95.7   | 96.8   | 96.1   | 97.2   |
|                                     | Total  | 98.0   | 98.0   | 97.5   | 97.0   | 97.5   |

### Retention Rate Three Years After Employment (SEKISUI CHEMICAL)

|   | FY2017 | FY2018 | FY2019 | FY2020 | FY2021 |
|---|--------|--------|--------|--------|--------|
| Retention Rate Three Years After Employment (%) | 90.6   | 88.6   | 93.1   | 89.6   | 89.0   |

### Training Results for Women (SEKISUI CHEMICAL Group)

|   |                                  | FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|---|----------------------------------|--------|--------|--------|--------|--------|
| Women's CDP Training                        | Women (persons)                  | 39     | 52     | 58     | 49     | 48     |
| (selected participants)                     | Supervisors (persons)            | 24     | 46     | 55     | 46     | 46     |
|   | Young employees (persons)        | _      | _      | _      | 55     | 36     |
| Women's Career Seminar (open participation) | While raising children (persons) | _      | _      | _      | 73     | 34     |
| (open participation)                        | All levels (persons)             | _      | _      | _      | 67     | 37     |

### Gender Wage Gap (SEKISUI CHEMICAL) (FY2023)

| Regular full-time employees (%) | Non-permanent, non-full-time employees (%) | Overall (%) |
|---------------------------------|--|-------------|
| 70.9                            | 110.0                                      | 71.7        |

Note 1: Including workers on loan from the Group to other companies.

Note 2: There is no wage disparity in the human resources system; based on the labor composition (age and qualifications) ratio

### **Employment Ratio of People with Disabilities (SEKISUI CHEMICAL)**

|   | FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|---|--------|--------|--------|--------|--------|
| Employment Ratio of People with Disabilities(%) | 2.9    | 2.7    | 2.5    | 2.3    | 2.4    |

Note: Some past figures have been revised due to improvements in precision.

### **Training Results for Seniors**

| Training name  | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|
| Employees in management positions who took career training after selecting to extend their mandatory retirement age (persons)                            | 51     | 35     | 55     |
| General employees who took career training after selecting to extend their mandatory retirement age (persons)  | 27     | 34     | 11     |
| Employees of Group companies who took career training after selecting to extend their mandatory retirement age (persons)                                 | _      | 50     | 127    |
| [Required] Employees at age 57 who took the required career training before selecting to extend their mandatory retirement age (persons)                 | _      | 94     | 69     |
| [Elective] Employees between the ages of 50 and 56 who took elective career training before selecting to extend their mandatory retirement age (persons) | _      | 60     | 41     |

### Breakdown of the Number of Employees (SEKISUI CHEMICAL Group) (FY2023)

| Number of employees (persons) | 26,929 |  |  |  |  |
|-------------------------------|--------|--|--|--|--|
| Breakdown by region (persons) |        |  |  |  |  |
| Japan                         | 19,856 |  |  |  |  |
| North America/Latin America   | 2,282  |  |  |  |  |
| Europe                        | 1,053  |  |  |  |  |
| Asia / Pacific                | 3,738  |  |  |  |  |

### Use of Childcare-related Systems (SEKISUI CHEMICAL)

|  |        | FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|--------|--------|--------|
| D 1: (1)   (0)   (0)   (0)   (1)   ( | Female | 100    | 95.8   | 100    | 100    | 97.1   |
| Ratio of those who took childcare leave (%)*1  | Male   | 39.0   | 34.6   | 47.3   | 68.1   | 69.8   |
| Average number of childcare leave acquisition  | Female | 259.2  | 270.3  | 293.8  | 358.0  | 371.7  |
| days (days)* <sup>2</sup>  | Male   | 24.7   | 43.3   | 38.8   | 29.1   | 47.3   |
| Ratio of those who returned to work after  | Female | 100    | 95.5   | 91.7   | 100    | 96.0   |
| childcare leave (%)  | Male   | 100    | 100    | 100    | 100    | 100    |

<sup>\*1</sup> Ratio of those who took childcare leave: Excludes those who are taking maternity leave

<sup>\*2</sup> Average number of childcare leave acquisition days: The average number of days of childcare leave taken by employees who completed the period during which they were eligible to take childcare leave in the subject fiscal year in FY2022.

### Training Results for Managers to Coach Employees' Self-support (SEKISUI CHEMICAL Group)

| Training Program Name  | FY2022 | FY2023 |
|--|--------|--------|
| Training for managers to coach employees' self-support (persons) | 202    | 74     |

### Hours Worked and Paid Vacation Days Taken (SEKISUI CHEMICAL)

|  | FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|--------|--------|
| Monthly average number of overtime hours per employee (hours)  | 18.0   | 15.6   | 18.2   | 19.0   | 18.7   |
| Annual average number of total hours worked per person (hours) | 1,914  | 1,903  | 1,925  | 1,932  | 1,919  |
| Percentage of paid vacation days taken per employee (%)        | 71.4   | 58.2   | 64.9   | 66.6   | 74.7   |
| Average number of paid vacation days taken per employee (days) | 13.6   | 11.2   | 12.5   | 12.8   | 14.1   |

- Note 1: Excluding managers and workers on loan from other companies.
- Note 2: The average number of overtime hours per employee per month is calculated based on the prescribed working hours of 7.5 hours.
- Note 3: Percentage of paid vacation days taken per employee = Number of paid vacation days taken / Available paid vacation days  $\times 100$

### **Number of Labor Union Members**

The SEKISUI CHEMICAL Labor Union serves as the Company's labor union. Adopting a union shop system, 100% of eligible employees are members (2,390 in FY2023).

### Health Checkups and Measures to Prevent Lifestyle-related Diseases

|   | FY2018 | FY2019 | FY2020 | FY2021 | FY2022 |
|---|--------|--------|--------|--------|--------|
| Percentage of employees receiving health checkups (%)                 | 99.6   | 98.2   | 98.6   | 98.9   | 99.5   |
| Percentage of employees receiving a secondary medical examination (%) | 78.0   | 67.1   | 69.7   | 67.7   | 70.0   |

### **Participation in Mental Health Training**

| Training name   |      | FY2021 | FY2022 | FY2023 |
|---|------|--------|--------|--------|
| Self-care training participation rate for all employees (%) | 76.9 | 74.8   | 83.5   | 84.7   |
| Managers: Line care training participation rate(%)          | _    | 91     | 90.8   | 57.9*  |
| Training participation rate for new employees(%)            | _    | _      | _      | 94.5   |

<sup>\*</sup> Only line managers are required to participate in FY2023.

### Rate of long-term leave due to mental health problems (%) (SEKISUI CHEMICAL Group)

| FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|--------|--------|--------|--------|--------|
| 0.77   | 0.98   | 1.02   | 1.13   | 1.14   |

### Stress-check Assessment Rate (%) (SEKISUI CHEMICAL Group)

| FY2019 | FY2020 | FY2021 | FY2022 | FY2023 |
|--------|--------|--------|--------|--------|
| 92.5   | 93.9   | 95.2   | 95.5   | 96.4   |

Note: Companies subject to stress check: Companies that are members of the SEKISUI Health Insurance Society (excluding some affiliated companies)

# Primary KPIs (7 Indicators) (see the aforementioned rate of prolonged absence due to mental health issues) (SEKISUI CHEMICAL Group)

|  | FY2020 | FY2021 | FY2022 | FY2023 |
|--|--------|--------|--------|--------|
| Implementation of 4 or more of the Seven Health Habits (%)     | 59.0   | 54.0   | 63.9   | 63.5   |
| Implementation ratio of workplace environment improvements (%) | 64.3   | 65.5   | 55.0   | 63.0   |
| Presenteeism (%)*1   | 65.5   | 64.7   | 57.6   | 57.6   |
| Absenteeism (days)*2   | 1.27   | 1.31   | 2.29   | 3.05   |
| Employees in an ideal health condition (%)*3                   | _      | _      | 33.1   | 31.9   |
| Work engagement (%)*4  | _      | _      | 3.05   | 3.01   |

<sup>\*1</sup> Presenteeism is a condition in which a person is working but is unable to perform at full capacity due to health problems. The University of Tokyo version one-question-type survey in FY2019, and WHO-HPQ survey from FY2020 onward.

<sup>\*2</sup> Absenteeism: Absent from work due to injury or illness. Actual calculation from FY2022

<sup>\*3</sup> Employees in an ideal health condition: Percentage of respondents who answered that their usual subjective mental and physical health was "very good" or "good" based on the survey with questions referenced from the OECD (BLI: Better Life Index).

<sup>\*4</sup> Work engagement: The nine-item average, of the nine-item version of the Utrecht Work Engagement Scale, the most widely used work engagement measurement.

### Incidences of injuries attributable to machines and equipment

Under the current Medium-term Management Plan, SEKISUI CHEMICAL Group is promoting safety activities based on the KPI of zero incidents of injuries attributable to machines and equipment with the aim of preventing serious accidents that could result in permanent disability by preventing injuries caused when caught or entangled in machinery and equipment. In FY2023, there were eight incidents of injuries attributable to machines and equipment.

| Key Implementation<br>Measures   | Management<br>Indicators  | Final Fiscal Year<br>(FY2025) Targets of the<br>Current Medium-term<br>Management Plan | Number of incidents<br>in FY2023 |
|--|---|--|----------------------------------|
| Safety audits, mutual on-site inspections, comments and sound improvements through on-site risk assessment | Zero incidents of injuries<br>attributable to machines<br>and equipment | 0  | 8                                |

### Environment-related Complaints and Accidents

### **Environment-related Complaints and Accidents (FY2023)**

| Cate      | gory    | Number of cases | Details  |
|-----------|---------|-----------------|--|
| Accidents | Fires   | 1               | A catalytic combustion device caught fire and some of the machine's connections burned.  The fire was extinguished by the public fire department without any injuries. |
|           | Leakage | 0               | _  |
| Comp      | laints  | 0               | _  |

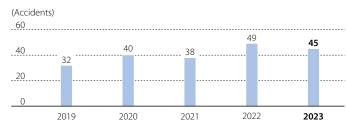

| Indicator  | Calculation Method  |
|------------|---|
| Fires      | Number of fire incidents involving firefighting activities by public fire departments that occurred during the fiscal year  |
| Leaks      | Number of incidents involving the off-site leakage of hazardous or toxic materials of 1/5 or more of the designated quantity or 200 liters or more that occurred during the fiscal year |
| Complaints | Number of complaints that could significantly affect the living environment of neighborhood residents that occurred during the fiscal year  |

## Safety Performance

### Japan

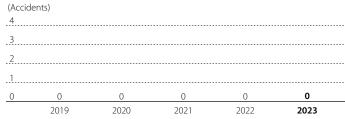

Aggregate scope: 48 production sites and 5 research institutes in Japan

### **Number of Occupational Accidents**

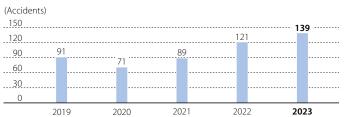

| Indicator                              | Calculation Method  |  |  |
|--|---|--|--|
| Number of<br>Occupational<br>Accidents | The number of occupational accidents (both those resulting in lost time and those not) occurring during a given fiscal year (April through the following March) |  |  |

### **Number of Facility Accidents**

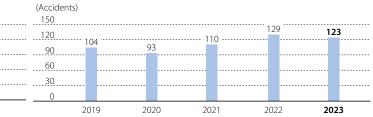

| Indicator                          | Calculation Method  |
|------------------------------------|---|
| Number<br>of Facility<br>Accidents | The number of incidents where facilities malfunctioned (fires, leaks, etc.) that fulfill at least one of the following criteria (SEKISUI CHEMICAL Group criteria), from (1) to (3), occurring during a given fiscal year (April through the following March) (1) Human harm: An accident causing at least 30 days' lost work (2) Material harm: 10,000,000 yen or greater (3) Opportunity loss: 20,000,000 yen or greater |

### Number of Cases of Long-term Sick Leave

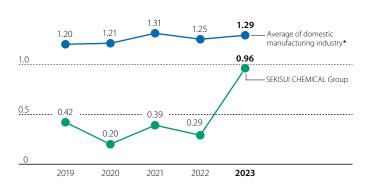

| Number | of | Commuting | Accidents |
|--------|----|-----------|-----------|
|--------|----|-----------|-----------|

| Indicator  | Calculation Method  |
|--|---|
| Number of<br>Cases of<br>Long-term<br>Sick Leave | Describes leave of 30 days or more consecutively for sickness or injury occurring in a Japanese production site or research institute during the given fiscal year (April to the following March), and which is newly-occurring. Recurrences within 6 months of the start of work attendance are not counted. However, leave attributable to an occupational injury is counted as an occupational accident and not classified as long-term sick leave |

| Indicator                           | Calculation Method   |  |  |  |
|-------------------------------------|--|--|--|--|
| Number of<br>Commuting<br>Accidents | The number of accidents occurring during commutes to Japanese production sites and research institutes during a given fiscal year (April to the following March); counting assault, damage, self-inflicted injury, and accidents; includes accidents while walking |  |  |  |

### **Frequency Rate Over Time**

\* Source of information for the Japanese manufacturing industry: Ministry of Health, Labour and Welfare, Survey on Occupational Accidents

| Indicator         | Calculation Method  |  |  |  |  |
|-------------------|---|--|--|--|--|
| Frequency<br>Rate | The total number of injuries, illness and fatalities in occupational accidents with lost time per 1,000,000 hours of total time worked during a given fiscal year (April through the following March) Formula for calculation: (Number of injuries, illness and fatalities in occupational accidents with lost time / total number of man-hours worked) × 1,000,000 |  |  |  |  |

### **Severity Rate Over Time**

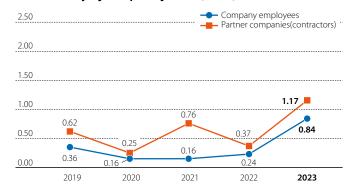

0.2

\* Source of information for the Japanese manufacturing industry: Ministry of Health, Labour and Welfare, Survey on Occupational Accidents

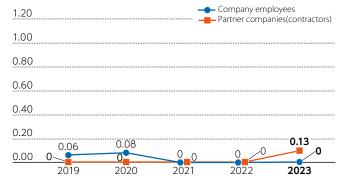

| Indicator     | Calculation Method  |  |  |  |
|---------------|---|--|--|--|
| Severity Rate | The total number of days of work lost per 1,000 hours of total time worked during a given fiscal year (April through the following March) Formula for calculation: (Number of days of work lost / total number of man-hours worked) × 1,000 |  |  |  |

### Lost Time Injury Frequency Rate (LTIFR)

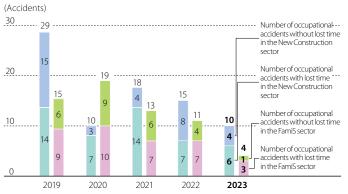

| Indicator                          | Calculation Method  |  |  |
|------------------------------------|---|--|--|
| Lost Time Injury<br>Frequency Rate | (Number of accidents causing sick<br>leave / total number of man-hours<br>worked) × 1,000,000 |  |  |

### **Occupational Illness Frequency Rate (OIFR)**

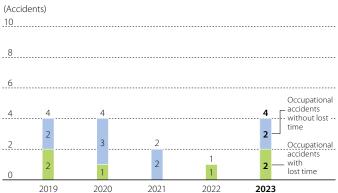

| Indicator                                 | Calculation Method   |  |  |  |
|---|--|--|--|--|
| Occupational<br>Illness<br>Frequency Rate | (Occupational illnesses / total number of man-hours worked) × 1,000,000 Occupational illnesses as defined by the Ministry of Health, Labour and Welfare, including heat stroke, lower back pain, and intoxication by chemical substances |  |  |  |

# Safety Performance in the Housing Company's Construction Sites

| Indicator  | Calculation Method  |
|--|---|
| Safety<br>performance<br>on the Housing<br>Company's<br>construction sites | The number of occupational accidents (both those resulting in lost time and those not) occurring on construction sites under the jurisdiction of the Housing Company during a given fiscal year (April through the following March) |

# Safety Performance with Respect to Construction Sites in the Urban Infrastructure & Environmental Products Company

| Indicator         | Calculation Method   |  |  |
|-------------------|--|--|--|
| Safety            | The number of occupational accidents (both those resulting |  |  |
| Performance       | in lost time and those not)                                |  |  |
| with Respect to   | occurring on construction sites                            |  |  |
| Construction      | under the jurisdiction of the UIEP                         |  |  |
| Sites in the UIEP | Company during a given fiscal                              |  |  |
| Company           | year (April through the following                          |  |  |
|                   | March)   |  |  |

### Overseas

Aggregate scope: 45 overseas production sites

### **Number of Occupational Accidents**

(Accidents) 60

| Indicator        | Calculation Method                 |  |
|------------------|------------------------------------|--|
| Occurrence of    | The number of occupational         |  |
| occupational     | accidents (both those resulting in |  |
| accidents        | lost time and those not) occurring |  |
| at overseas      | at overseas production sites and   |  |
| production sites | research institutes during a given |  |
| and research     | fiscal year (April through the     |  |
| institutes       | following March)                   |  |

### Japan and Overseas

Aggregate scope: 48 production sites, 5 research institutes, and 31 construction offices in Japan 45 production sites overseas

| Misrepresentation of work performance         | 1               |
| Collusive relationship with business partners | 0               |
| Others  | 30              |
| Total number of complaints                    | 153             |

## Donations to Political Organizations

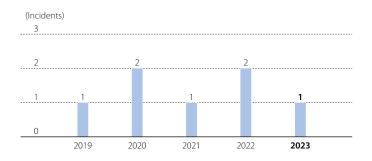

SEKISUI CHEMICAL Group does not make illegal political contributions. In addition, donations to political organizations that promote the formulation of public policies that benefit society as a whole are managed appropriately under the supervision of the Executive Officer of the Legal Department. The amounts of donations to these political organizations (SEKISUI CHEMICAL on a consolidated basis) are shown below.

(Unit: thousands of yen)

| Fiscal Year | Amount |
|-------------|--------|
| FY2018      | 14,429 |
| FY2019      | 16,936 |
| FY2020      | 8,705  |
| FY2021      | 10,690 |
| FY2022      | 12,562 |
| FY2023      | 9,856  |

### **Data Concerning Major Quality Issues**

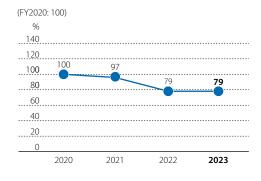

### **Number of Major Quality Issues**

| Indicator            | Calculation Method  |
|----------------------|---|
| Major Quality Issues | These refer to product and service quality issues determined by Corporate Headquarters or divisional company presidents, based on evaluations and judgments by the quality assurance manager, which could cause significant damage to customers, society, or SEKISUI CHEMICAL Group and lead to the loss of society's trust in the Group if not thoroughly resolved on an urgent basis including:  1) Major incidents  (1) Of the accidents that threatened user lives or lead to bodily harm, those in which the harm is serious.  (2) Product loss or destruction incidents for which there is a risk of severe or fatal user injuries  2) Problems which have serious impacts (cause serious loss) to customers, users, or society  3) Compliance (such as complying with related laws and regulations) problems related to product or service quality  4) Product recall problems |

### **Data Concerning External Loss Costs**

### **External Loss Costs**

| Indicator     | Calculation Method            |
|---------------|-------------------------------|
| External      | Costs arising from responding |
| failure costs | to product-related complaints |

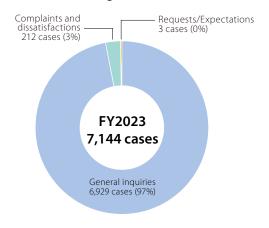

### Data on incoming calls to the Customer Consultation Office

### Incoming Contacts Received by the Customer Consultation Office in FY2023

| Indicator  | Calculation Method   |
|--|--|
| Incoming Contacts Received by the Customer Consultation Office | Number of inquiries by telephone, e-mail, letters, and other means |

### Breakdown of incoming contacts (SEKISUI CHEMICAL)

| Indicator                            | Calculation Method  |
|--------------------------------------|---|
| Breakdown<br>of incoming<br>contacts | <ul> <li>Incoming contacts are recorded on Insider Net and categorized as follows:</li> <li>General inquiries: Questions about SEKISUI CHEMICAL Group product specifications, how to use products, construction methods, stores selling the products, and services such as repairs</li> <li>Complaints and dissatisfaction: Incidents in which customers expressed their dissatisfaction or lodged complaints concerning SEKISUI CHEMICAL Group products or services</li> <li>Compliments: Calls during which praise was received for satisfaction with SEKISUI CHEMICAL Group's products or services</li> <li>Requests/Expectations: What customers require of SEKISUI CHEMICAL Group products and services (product improvements and new products, etc.), and inquiries relating to business activities, or comments on what is expected of SEKISUI CHEMICAL Group</li> <li>Note: Insider Net: A SEKISUI CHEMICAL Group intranet site on which details of incoming contacts to the Customer Consultation Office are released in real-time.</li> </ul> |

### Business Sites That Have Received Third-Party Certification for Their Quality Management Systems

The ratio of SEKISUI CHEMICAL Group production sites that have acquired ISO-9001 or other similar certifications is 99%.

# Intellectual Property Management (Number of Patents Held, etc.) =

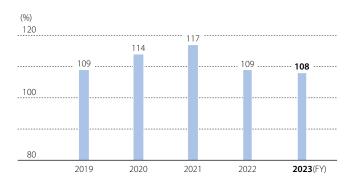

### **Number of Patent Application Filings**

### **Number of Patents Held**

### Patent Asset Index™ growth rate

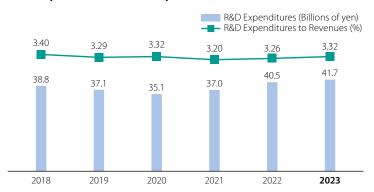

Note 1: Growth rate based on 2018 Patent Asset Index™ data, calculated using LexisNexis' PatentSight® patent analysis tool.

Note 2: The Patent Asset Index™ is a comprehensive evaluation index of patents that multiplies the technical value calculated based on the number of citations and the market value calculated based on the country of application for each patent with valid legal status, and adds them together to show the asset value of the patent.

### Innovation (R&D Expenditures) =

### **R&D Expenditures / R&D Expenditures to Revenues**
